

- **Team Name:** NexusDevs
- **Project Title:** UniFind
- **Project Description:**
  - **Problem:** Students after completing class 12<sup>th</sup>, struggle to find the college that best aligns with their academic performance, interests, and future goals.
  - **Solution:** Create a web application that streamlines the college selection process. Students can input their 12th percentage, JEE scores, and preferred stream, and our algorithm will generate college recommendations based on the user input. The platform will consider factors like college rankings, placement records, and student reviews for a comprehensive analysis.
